

I am in support of the elinination of Morse Code testing for the same reasons listed in the petetion. It would be beneficial to make this change immediately for the common good of amateur radio, national security, and the FCC. In addition, through this change, the restructuring of band use should permit full usage by licsensed amateurs, technican class and above. The current bands specified for CW should be open to voice communications with a small portion for mixed use CW. Charles Digby, KB0TOT
